

Brick type: South Down Multi
Location: Windsor

Project Architect: Zone Developments
Client: Zone Developments

Copperhorse Court is a brand new development by Zone Developments comprising thirteen individually designed cottage style homes in a gated, secure courtyard.

Copperhorse Court

Copperhorse Court is a brand new development by Zone Developments comprising thirteen individually designed cottage style homes in a gated, secure courtyard. These properties exude quality everywhere you look.

From the bonnet hipped roofing, corbel brickwork, the careful choice of brickwork to create an aged look sympathetic to the local vernacular, to the modern interiors offering all the conveniences you would expect in a 21st century designed home. Beautifully designed kitchens feature a host of stainless steel appliances with the bathrooms housing pure white sanitary ware complemented by quality chrome fittings.

Each plot has its own private rear garden and allocated parking. The development is in a prime location for easy access to the motorway and easy commuting to London City centre and Heathrow Airport.

Forterra supplied two bricks for this luxurious development in Windsor. The South Down Multi is a multi-tone tumbled product. The contrasting brick on this particular development is the Atherstone Red, a plain red stock brick, which has been used for detailing on the dwarf walls, above the windows and below the roofline.

The South Down Multi is a 'true' tumbled product as it is tumbled in the green state so as to give 'soft' tumbled edges. The contrasting brick on this particular development is the Atherstone Red, a plain red stock brick, which has been used for detailing on the dwarf walls, above the windows and below the roofline.
